

An Innovative Look at Privacy and Security of Healthcare Data

Join us for a free panel discussion by webcast on June 11, 11:30 am – 1:00 pm.

Moderator

**Dr. Ann Cavoukian, Distinguished Expert-in-Residence,
Privacy by Design Centre of Excellence at Ryerson University**

Panelists

- **Hassan Jaferi, CEO, Bitnobi and Co-Director of UTEST**
Many data platforms consume or create copies of raw data which increases the risk of data breaches. Bitnobi shares privacy-protected data directly from the data provider's infrastructure. This means that data can be shared without having to transfer or copy any raw data to the end user
- **James Bateman, CEO and Co-Founder, MedChart**
MedChart is a cloud-based portal that retrieves medical records from a variety of healthcare providers and allows patients to view, store and share them online.
- **Matt Jaksic, Business Development, SecureKey**
Verified.Me lets consumers prove their identity quickly, privately, and securely, from any iOS or Android enabled mobile device, using credentials from trusted sources like their bank, wireless provider or other established Verified.Me partners.
